

EBOO TWO-DAY TRAINING SUPPLY LIST

(FOR EBOO FULL SPECTRUM FROM O3UV)

Equipment & Supplies Obtained through O3UV:

- | | |
|--|--|
| <input type="checkbox"/> EBOO Full Spectrum UBI Device and Cart | <input type="checkbox"/> Tubing for Connecting O2 to EBOO Device |
| <input type="checkbox"/> EBOO Diffuser and Tubing w/Quartz Cuvette | <input type="checkbox"/> Magnetic Timer |
| <input type="checkbox"/> Collection Cup | <input type="checkbox"/> Blue Clamps/Hemostats |
| <input type="checkbox"/> O2 Regulator (for O2 Tank) | |

Disposable Supplies Clinic Sources (Per Therapy):

Medical Grade Oxygen Tank – E-tank is best for EBOO therapy – you should get ~11 treatments from one tank

- 500mL Normal Saline – this could be 2-250mL, 1-500mL, or if you can only get 1L bags, you can use them but some will be wasted
- 500mL or 1L Lactated Ringers
- 250mL D5W (5% Dextrose in Water).
- 7500 units of Heparin
- Regular Unfiltered IV Admin Tubing – for Heparin drip
- 30ml (or larger) Syringe – for air regulation
- Venipuncture Supplies
 - 2 20G needles
 - Gauze
 - 2 Tegaderm Dressing
 - Alcohol swabs
 - 2 Tourniquets
 - Tape
 - Gloves

Ordering More Supplies:

The above supplies listed are what is needed for each individual therapy. Although your initial EBOO purchase includes 10 EBOO Diffuser and Tubing w/Quartz Cuvettes, you will likely use most of these during the 2-day on-site training session. We recommend you purchase additional EBOO Diffuser and Tubing w/Quartz Cuvettes, so you have the needed supplies to treat patients immediately after the training session.

PLEASE NOTE: This Onsite EBOO Training Session is 2 FULL days of training and will require you close your office to regular patients for these 2 days to complete the training without interruptions.

Patient Volunteers:

The 2-day training schedule should allow time to administer four (4) therapies each day for a total of eight (8) therapies. You will need 8 different patient volunteers.

Note: Since this is a training event, it is recommended you use staff members instead of actual patients.

QUALIFYING YOUR PATIENT

- Has had reasonable dose of ozone at least once, within a few months prior
- Has two good veins to access
- Has been educated on the procedure
 - Risk/Benefits
 - Expectations have been set
 - Signed consent to treat
- Does not have any contraindications
- Has healthy vitals
- No allergies to Heparin or other anti-coagulant
- Can tolerate saline or other carrier
- Reasonable blood pressure
- Low O2 OK

PREPARING YOUR PATIENT

- Labs (if desired) – CBC, CMP, G6PD
- Eat protein prior to treatment
- Hydrate well
- Oral antioxidants up to two weeks in advance
- Nitric Oxide given three days prior for better vasodilation (We recommend Apex Energetics liquid Nitric Balance (liquid works quickly.)
- Blood-sugar above 110 (We recommend purchasing a glucometer, if you do not have one.)

Helpful Resources:

- **Hydrocollator by Chattanooga**
 - Moist Heat
 - Weighted pads
 - Vasodilation for better vein access as well as during treatment

- **Butterfly Ultrasound**

- **Quick Release Tourniquets**
